COPPERSLEEP

- Luxurious stretch cover incorporates woven copper to create a cool, clean, and healthy sleeping environment.
- The copper within the deep memory comfort layer adds another level of support to your mattress. When the copper particles are compressed it results in a firming response ensuring more support where body weight is concentrated i.e. hips and shoulders.
- Highgrove CopperSleep technology is also designed to help relieve sore and swollen joints and reduce inflammation.
- CopperSleep is anti-microbial and has anti-bacterial properties preventing odours from developing and keeping your mattress clean.
- Highgrove's New Generation EcoAdvantedge Pocket Spring System provides total body support across the entire sleep surface to ensure correct spinal alignment and further enhance sleep quality.
- Designed as a no-turn mattress - please regularly rotate 180° to extend mattress life and performance
